# COURSE DESCRIPTION

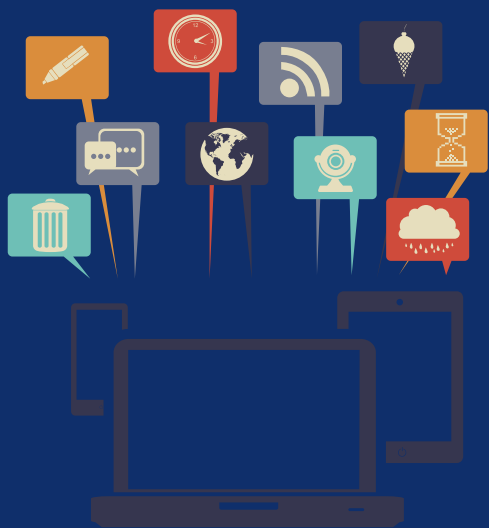

The Web Designing course offers a comprehensive introduction to the principles, practices, and tools needed to create visually appealing, user-friendly, and responsive websites. This course covers essential web design topics, including HTML, CSS, JavaScript, visual design principles, layout, and composition. Students will learn to develop responsive designs that work seamlessly across various devices and screen sizes. Throughout the course, students will gain hands-on experience by working on real-world projects, enabling them to build and manage web design projects from concept to completion. By the end of the course, students will have a solid foundation in web design principles, the technical skills to create modern websites.

# COURSE OUTCOMES

Upon completion of this course, students will have a thorough understanding of web design principles and practices. They will be capable of creating visually appealing, responsive, and user-friendly websites.

Students will also be proficient in using modern web design tools and technologies and will have developed a professional portfolio that demonstrates their skills and projects. Equipped with these skills, graduates will be prepared to pursue careers in web design and contribute to the development of modern, accessible, and effective websites.
